

## DESCRIPTION

- **Dehydration:** Remove residual moisture from tea leaves (reducing from 20%-30% to 5%-7%) to inhibit microbial activity and extend shelf life.
- **Flavor Enhancement:** Stimulate aromatic substances (e.g., terpenes, aromatic alcohols) in tea through moderate high temperature to form characteristic flavors such as caramel, honey, and jujube.
- **Off-Flavor Removal:** Volatilize undesirable odors in tea (e.g., grassy taste, astringent flavor) to improve taste mellowliness.
- **Quality Homogenization:** Maintain consistent moisture, color, and flavor of batch tea leaves to meet industrial production standards.

## ADVANTAGE

1. **Precise Temperature Control:** Adopt PLC intelligent temperature control with an error of  $\leq \pm 1^{\circ}\text{C}$ , avoiding uneven heating in traditional firewood roasting.
2. **High Efficiency:** Single batch baking capacity ranges from 7kg to 29kg (depending on model), reducing baking time by 60%-80% compared to traditional sun drying (e.g., oolong tea Baking takes only 30-90 minutes).
3. **Controllable Flavor:** Customize tea flavor by adjusting temperature (low temperature 60-80°C for aroma enhancement / high temperature 120-150°C for drying) and time (short-time light roasting / long-time heavy roasting).
4. **Standardized Production:** Baking parameters can be stored and reused for batches, ensuring consistent quality of tea leaves from different batches to meet commercial needs.
